

September 15, 2017

Mr. Anthony Krone  
Risk Manager  
Shelby County Schools  
160 South Hollywood – Room 152  
Memphis, Tennessee 38112

**RE: Lead in Drinking Water Sampling  
Dunbar Elementary School  
2606 Select Avenue  
Memphis, Tennessee  
Tioga Project No.: 24816.01**

Dear Mr. Krone,

At the request of Shelby County Schools (the Client), Tioga Environmental Consultants (Tioga) performed sampling of drinking water sources at Dunbar Elementary School for laboratory analysis of total lead concentrations.

As preliminary sampling of select water sources at this school revealed the potential for elevated lead levels in the potable water system, Tioga recommended additional sampling of all water fountains in the school to determine the extent of the issue. Following the receipt of the laboratory analytical results from the initial sampling event, Tioga informed Shelby County Schools Risk Management personnel, who instructed maintenance personnel to take the water fountains at this school out of service pending further testing.

Prior to this additional sampling event, the water fountains throughout the school had been shut off for approximately four days. Sampling was conducted early in the morning, before any potable water sources had been used for the day and prior to the arrival of any students or faculty. Maintenance personnel reactivated the water fountains immediately prior to sampling, and the water fountains were deactivated and taken out of service immediately following the sampling.

On September 12, 2017, Tioga representative Larkin Myers arrived onsite and was escorted through the building by Shelby County Schools personnel. First-draw potable water samples were collected in accordance with the Environmental Protection Agency (EPA) regulations codified in 40 CFR 141.86, and were documented and transferred under chain-of-custody protocol to Waypoint Analytical Laboratories in Memphis, Tennessee for analysis of total lead content.

**Down-to-earth partners. Sky's-the-limit solutions.**

The EPA has established an action level for public water supply systems at 15 micrograms of lead per liter of water (15 µg/L). The further EPA recommends that schools remove water fountains and other outlets used for consumption if lead levels exceed 20 µg/L. Though this school uses water from the municipal water supply and therefore does not qualify as a public water supply system, Tioga recommends that the more conservative EPA action level of 15 µg/L be used in the decision making process as to the continued operation of the potable water sources at the school.

**Results Based on Laboratory Analysis:**

Table 1 below summarizes the sampling locations, laboratory analytical results, and EPA action level for lead in drinking water. Sample results with a "<" symbol did not contain lead content above the laboratory detection limit. Samples highlighted in yellow exceeded the EPA action level for lead.

**Table 1  
Summary of Analytical Results  
Dunbar Elementary School  
September 12, 2017**

Sample ID	Sample Location	Total Lead (µg/L)	EPA Action Level (µg/L)
18-1	Water Fountain Near Room 111A (Bubbler)	1210	15
18-2	Low Water Fountain Near Room 107	60.7	
18-3	High Water Fountain Near Room 107	40.3	
18-4	Water Fountain Near Room 104C (Bubbler)	129	
18-5	Low Water Fountain East Side of Cafeteria	25.5	
18-6	High Water Fountain East Side of Cafeteria	17.6	
18-7	Low Water Fountain West Side of Cafeteria	115	
18-8	High Water Fountain West Side of Cafeteria	102	
18-9	Cafeteria Sink West	1.86	
18-10	Cafeteria Sink East	0.762	
18-11	Cafeteria Sink Far East	1.24	
18-12	Water Fountain Near Room 313A (Bubbler)	160	
18-13	Low Water Fountain Near Room 309	64.6	
18-14	High Water Fountain Near Room 309	47.8	
18-15	Water Fountain Near Room 303 Girls' Restroom (Bubbler)	32.4	
18-16	Water Fountain Near Room 303 Girls' Restroom (Bubbler)	548	
18-17	Low Water Fountain Near Room 213 Boys' Restroom	57.6	
18-18	High Water Fountain Near Room 213 Boys' Restroom	40.5	
18-19	Teachers' Lounge Sink - Right	1.09	
18-20	Teachers' Lounge Sink - Left	<0.513	
18-21	Gym Water Fountain	<0.513	

(µg/L) = Micrograms of lead per liter of water (parts per billion)

A review of the laboratory analytical results of the water samples collected revealed fifteen samples with total lead concentrations above the EPA action level for drinking water.

**Recommendations:**

Based upon the laboratory analytical results of the potable water samples collected from Dunbar Elementary School, Tioga recommends that the water sources above the EPA action level remain out of use.

The EPA provides technical guidance for reducing lead in drinking water in schools published in the October 2006 revision of the “3Ts for Reducing Lead in Drinking Water in Schools”. Tioga recommends that a plan be developed and implemented in accordance with this guidance with additional testing to identify potential sources of lead in this school and to remediate these sources as they are identified. As the next step in determining the sources of lead contamination, Tioga recommends follow-up post-flush testing for water sources that exceeded the EPA action level.

**Limitations**

Potable water sources with elevated lead levels may potentially be present in areas of the property that are not addressed with this report. This investigation only included the potable water sources specifically addressed.

We appreciate the opportunity to provide you with this service. Should you have any questions regarding this report, please contact me at (901) 791-2432.

Sincerely,  
TIOGA ENVIRONMENTAL CONSULTANTS, INC.

Eric Davis, CIE  
Environmental Scientist

**Enclosure: (1) Laboratory Analytical Report**

9/14/2017

Tioga Environmental Consultants  
Mr. Luke Hall  
357 North Main Street  
Memphis, TN, 38103

Ref: Analytical Testing  
Lab Report Number: 17-255-0246  
Client Project Description: 18ALL  
Project #24816.01

Dear Mr. Luke Hall:

Waypoint Analytical, Inc. received sample(s) on 9/12/2017 for the analyses presented in the following report.

The above referenced project has been analyzed per your instructions. The analyses were performed in accordance with the applicable analytical method.

The analytical data has been validated using standard quality control measures performed as required by the analytical method. Quality Assurance, method validations, instrumentation maintenance and calibration for all parameters (NELAP and non-NELAP) were performed in accordance with guidelines established by the USEPA (including 40 CFR 136 Method Update Rule May 2012) and NELAC unless otherwise indicated. Any parameter for which the laboratory is not officially NELAP accredited is indicated by a '~' symbol. These are not included in the scope because NELAP accreditation is either not available or has not been applied for. Additional certifications may be held/are available for parameters, where NELAP accreditation is not required or applicable. A full list of certifications is available upon request.

Certain parameters (chlorine, pH, dissolved oxygen, sulfite...) are required to be analyzed within 15 minutes of sampling. Usually, but not always, any field parameter analyzed at the laboratory is outside of this holding time. Refer to sample analysis time for confirmation of holding time compliance.

The results are shown on the attached Report of Analysis(s). Results for solid matrices are reported on an as-received basis unless otherwise indicated. This report shall not be reproduced except in full and relates only to the samples included in this report.

Please do not hesitate to contact me or client services if you have any questions or need additional information.

Sincerely,

*Rendell H. Thomas*

Randy Thomas  
Project Manager

*Laboratory's liability in any claim relating to analyses performed shall be limited to, at laboratory's option, repeating the analysis in question at laboratory's expense, or the refund of the charges paid for performance of said analysis.*
